

K-Work US

미국 한인 커뮤니티 특화 구인구직 플랫폼 사업 및 개발 착수 계획서

Version 0.1 | 2026-06-20 | Initial Market: LA/OC

문서 목적

이 문서는 개발 착수용 PRD + 사업계획서 + Slice 기반 실행 프롬프트입니다. Codex/Claude 에게 단계별로 넘길 수 있도록 각 Slice 의 목표, 범위, 검증 기준, 산출물을 명확히 정의했습니다.

중요한 포지셔닝 주의

제품은 '한국인만 지원 가능' 플랫폼이 아니라, 미국 내 Korean-English bilingual jobs 및 한인/아시안 커뮤니티 친화적 로컬 채용 플랫폼으로 설계해야 합니다. 채용 차별, 비자 상태 선호, 불법 현금 지급 조장으로 해석될 수 있는 문구는 제품 레벨에서 차단합니다.

Table of Contents

1. Executive Summary
2. Market & Legal Context
3. Product Vision and MVP Goals
4. Personas and Core Workflows
5. MVP Requirements
6. Recommended Technical Architecture
7. Data Model and API Surface
8. Trust, Safety, and Compliance Rules
9. Development Roadmap and Slices
10. Metrics, QA, and Launch Criteria
11. Codex/Claude Prompts from Step 0
12. Source Notes

1. Executive Summary

K-Work US 는 미국 내 한인 소상공인과 한국어 가능 구직자를 연결하는 모바일 우선 구인구직 플랫폼입니다. 초기 시장은 LA/OC 이며, 핵심 차별화는 한국어/영어 이중 언어 UX, 공고 검증, 급여/시간 투명성, 지원자 관리, 커뮤니티 기반 신뢰입니다.

기존 커뮤니티 게시판과 달리, 이 제품은 단순 공고 노출이 아니라 '공고 등록 -> 지원 -> 메시지 -> 면접 -> 채용 완료' 흐름을 한 곳에서 관리하는 lightweight hiring OS 를 목표로 합니다.

항목	결정
제품명	K-Work US / HanJob / K-Alba US 중 택일. '알바몬' 명칭은 상표 및 브랜드 혼동 리스크 때문에 사용하지 않음.
초기 지역	LA Koreatown, Buena Park, Fullerton, Irvine, Garden Grove, Torrance, Gardena, West Covina, Rowland Heights
초기 업종	식당/카페, 병원/치과 리셉션, 물류/무역/warehouse, 뷰티/네일/헤어, 학원/튜터링
초기 고객	한인 소상공인, Korean-English bilingual 구직자, 유학생/졸업생/이민자, 한국어 응대 인력이 필요한 회사
MVP 핵심	공고 검색, 원클릭 지원, 고용주 공고 등록, 지원자 관리, 관리자 검수, 신고/차단, 부스트 결제
North Star Metric	검증된 공고 1 개당 7 일 내 유효 지원 수

1.1 사업 성공 가설

- 1. 한인 소상공인은 Indeed/LinkedIn 보다 한국어 가능 구직자를 더 빠르게 찾는 채널에 비용을 지불할 의향이 있다.
- 2. 구직자는 흩어진 카톡방/게시판보다 급여, 시간, 위치, 영어 필요 수준이 명확한 모바일 플랫폼을 선호한다.
- 3. 초기에는 자동화보다 직접 영업과 공고 작성 대행이 traction 을 만든다.
- 4. 법무/신뢰 요소를 제품 레벨에서 강제하면 기존 게시판 대비 프리미엄 가격을 받을 수 있다.

2. Market & Legal Context

미국 내 한인 인구와 로컬 서비스업 채용 수요는 초기 시장을 만들기엔 충분합니다. Pew Research 는 2023 년 기준 미국 내 Korean population 을 약 183 만 명으로 보고, LA 메트로를 가장 큰 한인 거주권역으로 제시합니다 [S1] [S2]. BLS 의 2026 년 5 월 고용보고서에서는 leisure and hospitality 가 70,000 개, food services and drinking places 가 48,000 개 일자리를 추가했습니다 [S3].

다만 이 제품은 채용 플랫폼이므로 컴플라이언스 설계가 핵심입니다. EEOC 는 국적 차별과 특정 비자 상태 선호가 문제될 수 있음을 설명하고 [S4] [S5], USCIS 는 F-1 학생의 off-campus employment 및 OPT 시작 조건을 명확히 제한합니다 [S6] [S7]. 캘리포니아는 15 명 이상 고용주가 job posting 에 pay scale 을 포함해야 하는 요건도 있습니다 [S8].

시장 신호	제품에 주는 의미
LA/OC에 한인 커뮤니티 집중	초기 launch wedge 를 지역 기반으로 명확히 잡을 수 있음.
서비스업/식당 고용 수요 존재	알바/파트타임 공고 공급을 확보하기 쉬움.
기존 HeyKorean/JobKoreaUSA 등 존재	수요는 검증됐지만, 차별화 없으면 게시판 경쟁으로 끝남.
F-1/OPT/CPT 규정 복잡	구직자 UX 에 안내는 넣되, 법률 자문처럼 보이지 않게 설계.
CA pay transparency	MVP 부터 모든 공고에 hourly/salary range 를 필수화하는 것이 안전.

2.1 경쟁 환경

경쟁/대체재	강점	약점	K-Work 차별점
HeyKorean Job	한인 채용 포털 인지도	게시판형 UX, 지원자 관리 약함	모바일 UX, 검증, 지원/메시지 관리
JobKoreaUSA	미주 한인 취업 포지션	알바/로컬 소상공인 UX 한계	알바/파트타임 중심으로 더 좁게 시작
RadioKorea/커뮤니티 게시판	LA 접근성	정보 구조화/신뢰/지원 관리 부족	표준화된 공고 필드와 신고 시스템
Indeed/LinkedIn	규모와 검색량	한인/한국어 niche 가 넓게 분할	한국어 가능자와 한인 소상공인 집중
카카오톡 오픈채팅/지인소개	빠르고 익숙함	검색/보관/신뢰/관리 어려움	카톡보다 구조화된 채용 관리

3. Product Vision and MVP Goals

제품 비전: 미국 내 Korean-English bilingual local work 를 가장 안전하고 빠르게 찾는 플랫폼.

MVP 목표: LA/OC 에서 실제 공고 등록, 지원, 면접 연결, 채용 완료가 반복되는지 검증한다.

Goal	구체 목표	3개월 기준
Supply	검증된 공고 확보	100 개 이상
Demand	구직자 가입	1,000 명 이상
Liquidity	공고당 평균 지원 수	5 명 이상
Speed	공고 등록 후 첫 지원까지 시간	24 시간 이내
Revenue	유료 고용주	15 곳 이상
Trust	신고된 위험 공고 처리	24 시간 내 95%

3.1 MVP Non-Goals

- 처음부터 네이티브 iOS/Android 앱을 만들지 않는다. 모바일 웹 우선.
- Payroll, background check, 인력소개업 성공수수료는 MVP 에서 제외한다.
- 유학생에게 '합법 근무 가능' 판정을 제공하지 않는다. 일반 안내와 DSO/전문가 확인 유도만 제공한다.
- Korean-only, visa-only, cash-under-the-table 등 위험한 공고 문구를 허용하지 않는다.
- 전국 확장은 product-market fit 확인 후 진행한다.

4. Personas and Core Workflows

Persona	Needs	Pain	MVP Solution
구직자 - 유학생/졸업생	시간대 맞는 알바, 한국어 가능 직장	비자/근무자격 혼란, 정보 부족	근무자격 안내, 상세 필터, 원클릭 지원
구직자 - 이민자/부모님 세대	한국어 UI, 가까운 일자리	영어 플랫폼 사용 어려움	한국어 UI, 전화/문자 친화 지원
고용주 - 식당/카페	빠른 알바 채용	노쇼, 지원자 관리 어려움	면접 리마인더, 지원자 리스트
고용주 - 병원/치과	bilingual receptionist	Indeed 에서 적합자 찾기 어려움	한국어/영어 수준 필터
관리자	공고 품질과 법무 리스크 관리	불법/위험 공고 탐지 어려움	공고 승인, 금지어, 신고 큐

4.1 핵심 워크플로우

Flow	Steps	Definition of Done
구직자 지원	회원가입 -> 필터 검색 -> 상세 확인 -> 지원서 제출 -> 내 지원 현황 확인	지원이 applications 테이블에 저장되고 고용주 대시보드에 표시됨
고용주 공고 등록	사업장 생성 -> 공고 입력 -> 컴플라이언스 체크 -> 관리자 승인 -> 공개	공개 공고가 /jobs 에 노출되고 검색 가능
관리자 검수	대기 공고 확인 -> 금지어/누락 필드 확인 -> 승인/반려	반려 사유가 기록되고 고용주에게 표시
부스트	고용주가 공고 선택 -> 결제 -> featured/urgent 노출	결제 상태가 기록되고 노출 순위가 반영

5. MVP Requirements

5.1 Must/Should/Could

Priority	Feature	Notes
Must	Public job board	지역, 업종, 급여, 시간대, 영어 수준 필터
Must	Job detail page	급여 범위, 팁, 근무시간, 주소/근처 지역, 근무자격 일반 안내
Must	One-click application	프로필 기반 지원 + 간단 cover note
Must	Employer onboarding	사업장명, 주소, 연락처, 업종, verification status
Must	Post job	임금 범위, 근무시간, 업무 설명 필수
Must	Admin moderation	공고 승인/반려, 신고 처리
Must	Safety flags	Korean-only, visa-only, under-the-table 문구 탐지
Should	Messaging	앱 내 메시지 또는 이메일/문자 relay

Should	Featured/urgent paid listing	Stripe checkout 기반
Should	Bilingual copy generator	한국어 광고를 영어로 초안 생성
Could	Native app	PMF 이후
Could	AI matching	지원자/광고 데이터 쌓인 후

5.2 공고 필수 필드

- title, company_name, employer_id, category, job_type, location_city, location_state, address_display_mode
- pay_min, pay_max, pay_unit, tips_available, schedule_days, schedule_time_range
- language_requirement: Korean helpful / Korean required for customer communication / English required / Bilingual preferred 등 직무상 언어 요건으로 표현
- work_authorization_notice: 공통 안내 문구만 제공. 플랫폼이 개인의 취업 가능 여부를 판단하지 않음
- description, responsibilities, requirements, benefits, contact_method, application_method
- moderation_status: draft / pending / approved / rejected / paused / expired

6. Recommended Technical Architecture

초기 속도와 운영 단순성을 기준으로 아래 스택을 추천합니다. 팀이 작고 빠른 검증이 목적이면 custom backend 보다 managed auth/database 를 활용하는 것이 유리합니다.

Layer	Recommendation	Reason
Frontend	Next.js App Router + TypeScript + Tailwind	SEO 가능한 job detail pages, 모바일 웹 우선, 빠른 개발
Backend	Next.js Server Actions/API routes	초기에는 별도 API 서버 없이 단순화
Database	Postgres via Supabase	Auth/RLS/Storage 를 빠르게 연결 가능
Auth	Supabase Auth	구직자/고용주/관리자 role 기반 접근
Payments	Stripe Checkout	featured/urgent listing 유료화
Email	Resend or SendGrid	지원/승인/반려 알림
SMS	Twilio - Phase 2	면접 리마인더, 고용주 알림
Deployment	Vercel + Supabase	초기 배포/preview 환경 간단
Analytics	PostHog or Plausible	activation, application funnel 추적

대안 스택

이미 Express/React/Postgres 프로젝트 경험을 활용하고 싶다면 Vite React + Express + Postgres + Drizzle/Prisma 도 가능합니다. 다만 job board SEO 와 초기 배포 단순성을 고려하면 Next.js + Supabase 가 더 빠릅니다.

6.1 폴더 구조 권장

아래 구조는 Codex/Claude 가 Slice 별로 작업하기 좋게 책임을 분리합니다.

```

app/
  (public)/jobs, jobs/[id]
  (auth)/login, signup
  (employer)/employer/dashboard, employer/jobs/new
  (admin)/admin/moderation
components/
lib/db, lib/auth, lib/validation, lib/compliance
supabase/migrations
tests/
docs/

```

7. Data Model and API Surface

7.1 Core Tables

Table	Purpose	Key Fields
profiles	공통 사용자 프로필	id, email, display_name, role, locale, phone, created_at
job_seekers	구직자 상세	profile_id, resume_summary, availability, languages, work_auth_self_attestation
employers	사업장/회사	id, owner_profile_id, name, category, address, phone, website, verification_status
jobs	광고	id, employer_id, title, category, pay_min, pay_max, schedule, language_requirement, moderation_status
applications	지원	id, job_id, seeker_id, status, cover_note, created_at
messages	메시지	id, application_id, sender_id, body, read_at
reports	신고	id, reporter_id, target_type, target_id, reason, status
payments	결제	id, employer_id, job_id, stripe_session_id, product_type, status
job_boosts	노출 상품	job_id, boost_type, starts_at, ends_at, status
audit_logs	관리자/시스템 기록	actor_id, action, target_type, target_id, metadata

7.2 API/Actions

Area	Action	Auth	Validation
Jobs	createJob, updateJob, submitForReview	employer	pay range, location, schedule required
Jobs	approveJob, rejectJob	admin	rejection reason required
Search	getJobs (filters)	public	only approved and active jobs
Apply	createApplication	seeker	one active application per seeker/job
Employer	getApplicationsForJob	employer owner	owner check
Messages	sendMessage	participant	application participant check
Reports	createReport	authenticated	reason enum + free text
Payments	createCheckoutSession	employer	job ownership check

8. Trust, Safety, and Compliance Rules

MVP 부터 컴플라이언스 룰을 코드화해야 합니다. 이후 법률 검토를 받더라도 초기 데이터 구조와 UX 가 위험하면 고치기 어렵습니다.

Risk	Product Rule	Implementation
국적 차별	'한국인만' 금지, 'Korean language required/preferred for customer communication'처럼 직무상 언어 요건으로 표현	금지어 필터 + 공고 작성 helper text
비자 상태 선호	'OPT only', 'H-1B preferred' 등 금지	moderation flags
불법 현금 지급	'under the table', '세금 없이', 'cash only no tax' 금지	blocked keywords + admin review
급여 불투명	모든 공고에 pay_min/pay_max 필수	schema required + UI validation
유학생 근무 오해	플랫폼은 work authorization 을 판단하지 않음. 일반 안내와 DSO 확인 유도	job detail disclaimer
사기/임금체불	신고 누적 employer 는 자동 review	trust score + moderation queue
개인정보	이력서/전화번호 접근 제한, 삭제 요청 기능	RLS + privacy settings

8.1 기본 안내 문구

Job Detail Disclaimer

This platform does not determine your eligibility to work in the United States. Applicants are responsible for confirming their work authorization. F-1 students should consult their DSO regarding CPT/OPT or other employment authorization before accepting off-campus work.

Employer Posting Policy

Employers may describe language skills required for job duties, but postings may not restrict applicants by nationality, ethnicity, citizenship, immigration status, or other protected categories. All jobs must comply with federal, state, and local wage/hour laws.

9. Development Roadmap and Slices

Slice 는 작고 검증 가능한 단위로 나눕니다. 각 Slice 는 이전 Slice 의 결과를 기반으로 하며, 하나의 PR 로 리뷰/테스트 가능해야 합니다.

Slice	Name	Scope	Acceptance Criteria
0	Project baseline	Repo scaffold, env, coding standards, design tokens, README	앱이 local 에서 실행되고, lint/typecheck/test 스크립트가 존재
1	Public shell	홈, jobs list shell, layout, navigation	모바일/데스크톱에서 기본 UI 가 깨지지 않음
2	Auth & roles	구직자/고용주/관리자 role 모델	role 별 protected route 동작
3	Database schema	core tables, migrations, seed data	seed jobs 가 public page 에 표시
4	Job browse/search	filter, sort, pagination	승인된 공고만 검색됨
5	Job detail & apply	상세, 지원 flow, application status	중복 지원 방지
6	Employer onboarding	사업장 프로필 생성/수정	고용주만 사업장 생성 가능
7	Post job	공고 작성, validation, draft/pending	임금/시간 누락 시 제출 불가
8	Employer dashboard	공고/지원자 관리	고용주는 본인 공고 지원자만 조회
9	Admin moderation	승인/반려, safety flags	위험 키워드 공고가 review queue 에 들어감
10	Messaging & notifications	application thread, email alerts	지원/메시지 이벤트 알림
11	Verification & trust	employer verification, reports	검증 배지와 신고 큐 동작
12	Payments & boosts	Stripe checkout, featured/urgent listings	결제 성공 후 boost 활성화
13	Analytics dashboard	funnel and marketplace KPIs	admin 이 핵심 KPI 확인
14	Compliance polish	policy pages, disclaimers, audit logs	위험 문구/법무 안내 QA 통과
15	Launch hardening	QA, accessibility, SEO, deploy	production launch checklist 완료

9.1 Phase Plan

Phase	Weeks	Goal	Slices
Phase 0	Week 1	개발 환경/구조 확정	0-1
Phase 1	Weeks 2-4	공고 검색 + 지원 MVP	2-5
Phase 2	Weeks 5-6	고용주 공고 등록/관리	6-8
Phase 3	Weeks 7-8	관리자 검수/신뢰 시스템	9-11
Phase 4	Weeks 9-10	유료화/분석/출시 안정화	12-15

10. Metrics, QA, and Launch Criteria

10.1 Product Metrics

Metric	Definition	Initial Target
Verified jobs	approved and active jobs	100 by Month 3
Applicant activation	new seeker submits first application	30%+
Employer activation	new employer posts first job	50%+
Time to first applicant	approved job -> first application	<24h median
Applications per job	applications / approved jobs	5+
Paid conversion	paid employers / active employers	10-20%
Moderation SLA	flagged posts reviewed within 24h	95%

10.2 QA Checklist

- TypeScript strict mode passes.
- Lint and formatting pass.

- Unit tests for validation and compliance keyword rules pass.
- E2E smoke tests: browse job, apply job, post job, approve job, view applicant.
- Mobile viewport 390px and desktop viewport 1440px checked.
- SEO: job detail pages have title/description/open graph metadata.
- Accessibility: forms have labels, keyboard navigation works, color contrast acceptable.
- Security: role checks on server side, no client-only authorization, RLS policies reviewed.

11. Codex/Claude Prompts from Step 0

아래 프롬프트는 각 Slice 마다 하나씩 복사해서 Codex 또는 Claude Code 에 보낼 수 있도록 작성했습니다. 매번 시작 전 현재 repo 상태를 먼저 읽게 하고, 범위 밖 작업을 금지하며, 마지막에 변경 파일/검증 결과/다음 Slice 메모를 보고하게 합니다.

프롬프트 사용법

한 번에 여러 Slice 를 말기지 말고 Step 0 -> Step 1 -> Step 2 순서로 진행하세요. 각 Step 이 끝나면 git diff 와 테스트 결과를 확인하고, 문제가 없을 때 다음 Step 프롬프트를 보내는 방식이 안전합니다.

Step 0 - Project Baseline / Repo Scaffold

추천 Agent Skills: project-planning, nextjs, typescript, testing

You are the engineering lead for K-Work US, a Korean-English bilingual local hiring marketplace for the U.S. Korean community.

Goal:

Create the initial project baseline for a mobile-first job marketplace MVP.

Scope:

- If the repo is empty, initialize a Next.js + TypeScript + Tailwind project.
- If the repo already exists, inspect it first and adapt without destructive changes.
- Add a short docs/PRODUCT_BRIEF.md summarizing the product, MVP, compliance constraints, and slice plan.
- Add README setup instructions.
- Add scripts for dev, build, lint, typecheck, and test where applicable.
- Add basic app layout, font setup, and placeholder home page.
- Add .env.example with placeholders only. Never add real secrets.

Acceptance criteria:

- npm/pnpm install works.
- dev server starts.
- lint and typecheck scripts exist and pass or are clearly documented if unavailable.
- README explains local setup.
- docs/PRODUCT_BRIEF.md exists.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 1 - Public Product Shell

추천 Agent Skills: frontend, ui-ux, responsive-design

Context:

K-Work US is a mobile-first Korean-English bilingual local hiring platform. Initial market is LA/OC.

Goal:

Build the public-facing shell and navigation without connecting real data yet.

Scope:

- Create public pages: /, /jobs, /jobs/[id] using mock data.
- Add mobile-first header, bottom navigation or compact mobile nav, and desktop nav.
- Add job card component with title, company, city, pay range, schedule, language requirement, and status badge.
- Add filter UI placeholders for city, category, job type, pay, schedule, and Korean/English requirement.
- Add basic bilingual copy where useful, but default UI can be Korean-first.

Acceptance criteria:

- /jobs renders a list of mock approved jobs.
- /jobs/[id] renders a mock detail page with disclaimer section.

- UI works at 390px and 1440px widths.
- No backend/database required in this slice.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 2 – Auth and Role Model

추천 Agent Skills: auth, security, typescript

Goal:

Implement authentication scaffolding and role-based route protection.

Scope:

- Add auth provider integration stub or Supabase Auth if Supabase is already configured.
- Define roles: seeker, employer, admin.
- Add protected route groups/pages:
 - /seeker/profile
 - /employer/dashboard
 - /admin/moderation
- Add server-side role guard helpers in lib/auth.
- Add UI states for signed out, signed in, wrong role, and loading.
- Keep secrets in environment variables only.

Acceptance criteria:

- A signed-out user cannot access protected dashboards.
- Role guard helpers are tested or documented with clear usage.
- UI does not rely only on client-side checks for protected data.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 3 – Database Schema and Seed Data

추천 Agent Skills: database, postgres, supabase, migrations

Goal:

Create the MVP database schema and seed data for jobs, employers, profiles, and applications.

Scope:

- Add migrations for core tables:
 - profiles, job_seekers, employers, jobs, applications, reports, audit_logs.
- Add enum-like constraints or TypeScript constants for roles, job status, moderation status, application status.
- Add seed data for LA/OC sample employers and approved jobs.
- Add database access layer in lib/db or lib/data.
- Add basic RLS policy notes if using Supabase. Do not overbuild advanced policies in this slice unless easy.

Acceptance criteria:

- Migrations are reproducible.
- Seed data creates at least 10 sample approved jobs and 2 pending jobs.
- Public jobs query returns only approved/active jobs.
- Types are generated or manually defined with strict TypeScript.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 4 – Job Browse, Search, and Filters

추천 Agent Skills: frontend, backend, search, testing

Goal:

Connect the /jobs page to real database-backed job search.

Scope:

- Replace mock jobs with database query.
- Implement filters: city, category, job type, pay range, schedule, language requirement.
- Implement sort: newest, pay high-to-low, featured first.
- Implement pagination or load more.
- Ensure only approved and active jobs are public.
- Add empty state and loading state.

Acceptance criteria:

- Filters affect results correctly.
- Pending/rejected jobs never appear on public pages.
- Search query is URL-state based so links are shareable.
- Add tests for filter query builder if practical.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 5 – Job Detail and One-Click Apply

추천 Agent Skills: frontend, backend, forms, validation

Goal:

Allow job seekers to apply to an approved job.

Scope:

- Connect /jobs/[id] to real job data.
- Add application form: profile summary, availability, short note, contact preference.
- Require authenticated seeker role for application submit.
- Prevent duplicate active applications for the same seeker/job.
- Add /seeker/applications page to show application history and status.
- Add job detail compliance disclaimers about work authorization.

Acceptance criteria:

- Seeker can submit one application per job.
- Duplicate application attempt shows a friendly message.
- Employer/admin-only fields are not exposed publicly.
- Application appears in seeker application history.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.

- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 6 – Employer Onboarding and Company Profile

추천 Agent Skills: forms, validation, security, ux

Goal:

Build employer onboarding so business owners can create a company profile.

Scope:

- Add /employer/onboarding page.
- Collect employer/company fields: business name, category, city, state, address, phone, website, contact email.
- Add `verification_status` default: `unverified`.
- Add server-side validation.
- Add edit company profile page.
- Only employer role can create/edit their employer profile.

Acceptance criteria:

- Employer can create and edit one or more company profiles depending on schema choice. If only one is simpler, document it.
- Non-employer users cannot access employer onboarding.
- Validation errors are clear and Korean-first.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 7 – Employer Job Posting Flow

추천 Agent Skills: forms, compliance, validation, database

Goal:

Build the employer job posting form with compliance-first validation.

Scope:

- Add /employer/jobs/new.
- Required fields: title, category, city/state, pay_min, pay_max, pay_unit, schedule, job type, language requirement, description, requirements.
- Add helper text that language requirements must be job-related.
- Add blocked keyword detection for risky phrases:
Korean-only nationality wording, visa-only/preferred wording, under-the-table/cash no tax wording.
- New jobs should be draft or pending_review, not public immediately.
- Add /employer/jobs page to list employer's jobs and statuses.

Acceptance criteria:

- Cannot submit without pay range and schedule.
- Risky phrases are flagged and prevent submission or route to review with clear warnings.
- Submitted job appears as pending_review and is not public.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.

- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 8 – Employer Dashboard and Application Management

추천 Agent Skills: dashboard, authorization, data-table

Goal:

Allow employers to manage posted jobs and review applicants.

Scope:

- Build /employer/dashboard summary: active jobs, pending jobs, new applications.
- Build job-specific applications page.
- Show applicant name, availability, note, status, created date.
- Allow employer to update application status: new, reviewed, interview, hired, rejected.
- Enforce that employers only see applications for their own jobs.

Acceptance criteria:

- Employer cannot access another employer's applications by URL guessing.
- Status updates are persisted and audit logged if audit_logs exists.
- Dashboard remains usable on mobile.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 9 – Admin Moderation and Safety Flags

추천 Agent Skills: admin, compliance, moderation, audit

Goal:

Build admin moderation for job approvals and risk control.

Scope:

- Add /admin/moderation page.
- List pending_review jobs with flagged keyword summary.
- Admin can approve, reject with reason, or request changes.
- Add audit log records for moderation actions.
- Add admin-only view of reports if reports table exists.
- Add moderation policy copy in docs/MODERATION_POLICY.md.

Acceptance criteria:

- Approved jobs become public.
- Rejected jobs remain private and show rejection reason to employer.
- Non-admin users cannot access moderation pages/actions.
- Risky keyword examples are covered by tests.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 10 – Messaging and Notifications

추천 Agent Skills: messaging, email, event-driven-design

Goal:

Create a lightweight application-centered messaging and notification system.

Scope:

- Add messages table if not already present.
- Add message thread per application between seeker and employer.
- Add email notification stubs for application submitted, status changed, new message.
- Use a provider abstraction: lib/notifications/sendEmail.ts with mock/dev implementation.
- Do not add real API keys.

Acceptance criteria:

- Seeker and employer can exchange messages within an application thread.
- Users cannot access message threads they are not part of.
- Dev mode logs notification payloads without sending real email.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 11 – Verification, Reports, and Trust Layer

추천 Agent Skills: trust-safety, admin, database

Goal:

Add employer verification and user reporting to improve trust.

Scope:

- Employer verification fields: verification_status, verification_notes, verified_at.
- Admin can mark employer as verified/rejected/needs_info.
- Public job cards show verified badge when applicable.
- Add report flow for jobs/employers/messages.
- Admin can view and resolve reports.
- Add simple trust score calculation or report count display for admins only.

Acceptance criteria:

- Verified badge is only shown for verified employers.
- Report submissions are stored and visible to admin.
- Report flow does not expose reporter identity publicly.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 12 – Stripe Payments and Job Boosts

추천 Agent Skills: payments, stripe, security

Goal:

Implement paid featured/urgent job boosts using Stripe Checkout.

Scope:

- Add products: featured_7_day, urgent_7_day, featured_30_day.
- Add create checkout session server action/API route.
- Add webhook handler to mark payment succeeded and activate job_boost.
- Featured/urgent jobs should sort above normal jobs where appropriate.

- Add employer billing page with payment history.
- Use test mode and environment variables only.

Acceptance criteria:

- Employer can initiate checkout for their own job.
- Webhook success activates boost.
- Users cannot boost jobs they do not own.
- Public job list shows featured/urgent badges and ordering.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 13 – Analytics and KPI Dashboard

추천 Agent Skills: analytics, admin-dashboard, product-metrics

Goal:

Add product and marketplace metrics needed for MVP validation.

Scope:

- Add admin analytics dashboard.
- Show: total approved jobs, pending jobs, active employers, seeker signups, applications, applications per job, time to first applicant if data supports it.
- Add event logging abstraction for key events: job_viewed, job_applied, job_posted, job_approved, checkout_started, boost_activated.
- Use simple database aggregation first. External analytics can be added later.

Acceptance criteria:

- Admin can see MVP KPIs in one page.
- Event logging does not break core flows if it fails.
- Metrics queries are reasonably efficient for MVP scale.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 14 – Compliance UX and Policy Pages

추천 Agent Skills: legal-ux, content, accessibility

Goal:

Polish compliance-critical UX and add policy pages.

Scope:

- Add /terms, /privacy, /posting-policy, /work-authorization-info pages with placeholder legal copy marked for attorney review.
- Add disclaimers to job detail and application flow.
- Add posting policy acknowledgment checkbox for employers before submitting jobs.
- Add blocked keyword and required field test coverage.
- Ensure copy avoids legal advice; use 'information only' framing.

Acceptance criteria:

- Employer must acknowledge posting policy before first job submission.
- Job detail shows work authorization disclaimer.

- Terms/privacy pages exist with attorney-review placeholders.
- Compliance tests pass.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.

Step 15 - Launch Hardening and Deployment

추천 Agent Skills: qa, accessibility, deployment, seo

Goal:

Prepare the MVP for a small private beta launch in LA/OC.

Scope:

- Add launch checklist in docs/LAUNCH_CHECKLIST.md.
- Run and fix lint/typecheck/test/build.
- Add basic E2E smoke tests for browse, apply, post job, approve job.
- Improve SEO metadata for homepage, jobs page, and job detail pages.
- Check mobile layout at 390px and desktop at 1440px.
- Review accessibility: labels, focus states, keyboard navigation.
- Document deployment steps for Vercel/Supabase.

Acceptance criteria:

- Build passes.
- Critical smoke tests pass or are documented with known limitations.
- Launch checklist includes environment variables, admin setup, seed data removal, Stripe test/live mode, legal copy review.
- No known P0 issues remain.

Global rules:

- Work only within the current repository.
- Do not delete existing files unless explicitly necessary and explain why.
- Keep the implementation small and slice-scoped.
- Use TypeScript with strict typing.
- Prefer server-side authorization checks over client-only checks.
- Do not use the name 'AlbaMon' or any confusingly similar brand name in code or UI.
- Product positioning must be Korean-English bilingual jobs, not Korean-only hiring.
- Do not add illegal or risky employment guidance. Use disclaimers for work authorization.
- At the end, report: files changed, commands run, test results, risks, and next-step recommendation.
